

Design and Analysis of Algorithms

SECOND EDITION

S. Sridhar

Professor

Department of Information Science and Technology
College of Engineering, Guindy Campus
Anna University, Chennai

OXFORD
UNIVERSITY PRESS

Detailed Contents

Features of the Book iv

Preface vi

1	Introduction to Algorithms	1	3.4 Best-, Worst-, and Average-case Complexity	55
1.1	Introduction	1	3.5 Rate of Growth	56
1.2	Need for Algorithmic Thinking	1	3.5.1 Measuring Larger Inputs	56
1.3	Overview of Problems	3	3.6 Asymptotic Analysis	59
1.3.1	Computational Problems, Instance and Size	3	3.6.1 Asymptotic Notations	60
1.4	Overview of Algorithms	4	3.6.2 Limits and Asymptotic Notations	64
1.5	Need for Algorithm Efficiency	6	3.6.3 Asymptotic Rules	68
1.6	Fundamental Stages of Problem Solving	7	3.6.4 Asymptotic Complexity Classes	69
1.6.1	Understanding the Problem	7	3.7 Empirical Analysis and Algorithm Visualization	70
1.6.2	Planning an Algorithm	7	3.7.1 Empirical Analysis	70
1.6.3	Designing an Algorithm	8	4 Mathematical Analysis of Recursive Algorithms	76
1.6.4	Validating and Verifying an Algorithm	9	4.1 Introduction to Recurrence Equations	76
1.6.5	Analysing an Algorithm	9	4.1.1 Linear Recurrences	77
1.6.6	Implementing an Algorithm and Performing Empirical Analysis	11	4.1.2 Non-linear Recurrences	79
1.6.7	Post (or Postmortem) Analysis	11	4.2 Formulation of Recurrence Equations	80
1.7	Classification of Algorithms	11	4.3 Techniques for Solving Recurrence Equations	82
1.7.1	Based on Implementation	11	4.3.1 Guess-and-verify Method	82
1.7.2	Based on Design	13	4.3.2 Substitution Method	84
1.7.3	Based on Area of Specialization	13	4.3.3 Recurrence-tree Method	87
1.7.4	Based on Tractability	13	4.3.4 Difference Method	90
2	Basics of Algorithm Writing	17	4.4 Solving Recurrence Equations Using Polynomial Reduction	91
2.1	Computational Thinking	17	4.4.1 Solving Homogeneous Equations	91
2.1.1	Decomposition	18	4.4.2 Solving Non-homogeneous Equations	95
2.1.2	Pattern Matching	18	4.5 Divide-and-conquer Recurrences	95
2.1.3	Abstraction	18	4.5.1 Master Theorem	96
2.1.4	Algorithm Design	18	4.6 Transformations	101
2.2	Design Approaches	19	4.6.1 Domain Transformation	102
2.2.1	Bottom-up Approach	20	5 Data Structures—I	107
2.3	Algorithm Specifications	21	5.1 Data Structures and Algorithms	107
2.3.1	Guidelines for Writing Algorithms	22	5.2 Lists	108
2.4	Iterative Algorithms	26	5.2.1 Linear Lists	108
2.5	Recursive Algorithms	33	5.2.2 Linked Lists	111
2.6	Algorithm Correctness	39	5.3 Stacks	115
3	Basics of Algorithm Analysis	44	5.3.1 Representation and Operations on Stacks	115
3.1	Basics of Algorithm Complexity	44	5.4 Queues	117
3.2	Introduction to Time Complexity	45	5.4.1 Queue Representation	117
3.3	Analysis of Iterative Algorithms	47		
3.3.1	Measuring Input Size	47		
3.3.2	Measuring Running Time	48		

5.5	Trees	119	8.1.2	<i>Advantages and Disadvantages of Divide-and-conquer Paradigm</i>	203
5.5.1	<i>Tree Terminology</i>	119	8.2	Merge Sort	204
5.5.2	<i>Classification of Trees</i>	121	8.3	Quicksort	208
5.5.3	<i>Binary Tree Representation</i>	122	8.3.1	<i>Partitioning Algorithms</i>	209
5.5.4	<i>Binary Tree Operations</i>	123	8.3.2	<i>Variants of Quicksort</i>	213
5.6	Graphs	127	8.4	Multiplication of Long Integers	214
5.6.1	<i>Terminologies and Types of Graphs</i>	127	8.4.1	<i>Divide and Conquer Approach</i>	215
5.6.2	<i>Graph Representation</i>	130	8.5	Strassen Matrix Multiplication	217
5.7	Elementary Graph Algorithms	131	8.6	Tiling Problem	221
5.7.1	<i>Graph Traversal Algorithms</i>	131	8.7	Closest-pair Problem	223
5.7.2	<i>Cycle Detection</i>	134	8.8	Convex Hull	225
5.7.3	<i>Connected Components</i>	137	8.8.1	<i>Quickhull</i>	225
5.7.4	<i>Strongly Connected Components</i>	138	8.8.2	<i>Merge Hull</i>	226
5.7.5	<i>Biconnected Components</i>	139	8.9	Fourier Transform for Polynomial Multiplication	227
5.7.6	<i>Spanning Tree and Minimum-cost Spanning Tree</i>	141	8.9.1	<i>Improvement of Polynomial Multiplication using Value Representation</i>	228
6	Data Structures—II	147	8.9.2	<i>Divide and Conquer Approach and Fourier Transform</i>	228
6.1	Introduction to Binary Search Tree	147	8.9.3	<i>Fast Discrete Fourier Transform (FFT) using Divide and Conquer Approach</i>	231
6.2	AVL Trees	152	8.9.4	<i>Polynomial Multiplication</i>	232
6.3	Binary Heaps	156	9	Decrease-and-conquer Approach	237
6.4	Binomial Heaps	163	9.1	Introduction	237
6.5	Fibonacci Heap	168	9.2	Decrease by Constant Method	238
6.6	Disjoint Sets	170	9.2.1	<i>Insertion Sort</i>	239
6.7	Amortized Analysis	173	9.2.2	<i>Topological Sort</i>	242
6.7.1	<i>Aggregate Method</i>	174	9.2.3	<i>Generating Permutations</i>	246
6.7.2	<i>Accounting Method</i>	174	9.2.4	<i>Generating Subsets</i>	248
6.7.3	<i>Potential Method</i>	175	9.3	Decrease by Constant Factor Method	249
7	Brute Force Approaches	179	9.3.1	<i>Binary Search</i>	249
7.1	Introduction	179	9.3.2	<i>Fake Coin Detection</i>	251
7.1.1	<i>Advantages and Disadvantages of Brute Force Method</i>	180	9.3.3	<i>Russian Peasant Multiplication Problem</i>	252
7.2	Linear Search	180	9.4	Decrease by Variable Factor Method	253
7.2.1	<i>Analysis of Recursion Programs</i>	181	9.4.1	<i>Interpolation Search</i>	253
7.3	Sorting Problem	182	9.4.2	<i>Selection and Ordered Statistics</i>	254
7.3.1	<i>Bubble Sort</i>	183	9.4.3	<i>Finding Median</i>	257
7.3.2	<i>Selection Sort</i>	185	9.4.4	<i>Selection (Deterministic and Random Selection)</i>	257
7.4	Computational Geometry Problems	187	9.4.5	<i>Finding Median using Median of Medians</i>	259
7.4.1	<i>Closest-pair Problem</i>	187	10	Time–Space Tradeoffs	264
7.4.2	<i>Convex Hull Problem</i>	189	10.1	Introduction to Time-Space Tradeoffs	264
7.5	Exhaustive Searching	191	10.2	Counting Sort	264
7.5.1	<i>15-puzzle Problem</i>	191	10.3	Bucket Sort	268
7.5.2	<i>8-queen Problem</i>	193	10.4	Radix Sort	270
7.5.3	<i>Magic Squares</i>	193	10.5	Shell Sort	271
7.5.4	<i>Container Loading Problem</i>	193	10.6	Hashing and Hash Tables	273
7.5.5	<i>Knapsack Problem</i>	195	10.6.1	<i>Introduction to Hash Functions</i>	273
7.5.6	<i>Assignment Problem</i>	197	10.6.2	<i>Hash Functions Construction</i>	273
8	Divide-and-conquer Approach	202			
8.1	Introduction	202			
8.1.1	<i>Recurrence Equation for Divide and Conquer</i>	203			

10.6.3 Hash Table Operations	275	13 Dynamic Programming	361
10.6.4 Collision Resolution Techniques	276	13.1 Basics of Dynamic Programming	361
10.7 Introduction to <i>M</i> -ary Trees	278	13.2 Components of Dynamic Programming	363
10.7.1 <i>B</i> -Tree	279	13.3 Fibonacci Problem	365
10.7.2 <i>B+</i> Trees	284	13.3.1 <i>Bottom-up Approach</i>	365
11 Greedy Algorithms	288	13.3.2 <i>Top-down Approach and Memoization</i>	366
11.1 Introduction to the Greedy Approach	288	13.4 Computing Binomial Coefficients	367
11.2 Components of Greedy Algorithms	289	13.5 Multistage Graph Problem	370
11.2.1 <i>Properties of Greedy Algorithms</i>	290	13.5.1 <i>Forward Computation Procedure</i>	370
11.3 Coin Change Problem	291	13.5.2 <i>Backward Computation Procedure</i>	374
11.4 Scheduling Problems	292	13.6 Transitive Closure and Warshall Algorithm	376
11.4.1 <i>Shortest Job First Scheduling</i>	292	13.7 Floyd–Warshall All-Pairs Shortest-Path Algorithm	379
11.4.2 <i>Scheduling with Deadline</i>	294	13.8 Bellman-Ford Algorithm	382
11.4.3 <i>Activity Selection Problem</i>	296	13.9 Travelling Salesperson Problem	385
11.5 Knapsack Problem	298	13.10 Chain Matrix Multiplication	387
11.6 Optimal Storage of Tapes	301	13.11 Knapsack Problem	394
11.7 Optimal Merge Problem	302	13.12 Optimal Binary Search Trees	397
11.7.1 <i>Evaluation of Optimal Tree of Merging</i>	303	13.12.1 <i>Dynamic Programming Approach for Constructing Optimal BSTs</i>	398
11.8 Huffman Coding	304	13.13 Flow-Shop Scheduling Problem	402
11.8.1 <i>Efficiency of Huffman Code Using Weighted Tree</i>	306	13.13.1 <i>Single-machine Sequencing Problem</i>	402
11.9 Tree Vertex Splitting Problem	308	13.13.2 <i>Two-machine Sequencing Problem</i>	403
11.10 Minimum Spanning Trees	310	14 Backtracking	410
11.10.1 <i>Kruskal's Algorithm</i>	310	14.1 Introduction	410
11.10.2 <i>Prim's Algorithm</i>	315	14.2 Basics of Backtracking	411
11.10.3 <i>Single-Source Shortest-Path Problems</i>	319	14.2.1 <i>Generation of State-space Trees</i>	412
12 Transform-and-conquer Approach	328	14.2.2 <i>Searching State-space Trees</i>	413
12.1 Introduction to Transform and Conquer	328	14.2.3 <i>Implementation of Backtracking Algorithm</i>	415
12.2 Introduction to Instance Simplification	329	14.3 <i>N</i> -Queen Problem	416
12.3 Gaussian Elimination and Matrix Operations	330	14.4 Sum of Subsets Problem	418
12.4 Applications of Gaussian Elimination	336	14.5 Vertex Colouring Problem	421
12.4.1 <i>LU Decomposition</i>	337	14.6 Hamiltonian Circuit Problem	423
12.4.2 <i>Solving a set of Linear Equations using LU Decomposition</i>	340	14.7 Generating Permutation	427
12.4.3 <i>LUP Decomposition</i>	342	14.8 Graham Scan	428
12.4.4 <i>Solving Linear Equations using LU Decomposition</i>	344	15 Branch-and-bound Technique	434
12.4.5 <i>Finding Matrix Inverse using Gaussian Elimination</i>	344	15.1 Introduction	434
12.4.6 <i>Finding Determinant using LU Decomposition</i>	346	15.2 Branch and Bound Technique	435
12.5 Change of Representation and Heap Sort	348	15.3 Search Techniques for Branch-and-Bound Technique	436
12.6 Polynomial Evaluation Using Horner's Method	351	15.3.1 <i>BFS Using Branch and Bound Algorithm—FIFOB</i>	437
12.7 Binary Exponentiation	353	15.3.2 <i>LIFO with Branch and Bound</i>	438
12.7.1 <i>Left-to-right Binary Exponentiation</i>	355	15.3.3 <i>Least Cost with Branch and Bound</i>	438
12.7.2 <i>Right-to-left Binary Exponentiation</i>	356	15.4 15-puzzle Game	439
12.8 Problem Reduction	357	15.5 Assignment Problem	442
		15.6 Traveling Salesperson Problem	447
		15.7 Knapsack Problem	449

16 String Algorithms	457	18.5 Complexity Classes	521
16.1 Introduction to String Processing	457	18.5.1 Class P	522
16.2 Basic String Algorithms	458	18.5.2 Class NP	523
16.2.1 Length of Strings	458	18.5.3 NP-hard Problems	523
16.2.2 Concatenation of Two Strings	459	18.6 Theory of NP-Complete Problems	524
16.2.3 Finding Substrings	459	18.7 Reductions	525
16.3 Longest Common Subsequences	460	18.7.1 Turing Reduction	525
16.3.1 Brute Force Method	460	18.7.2 Karp Reduction	526
16.3.2 Dynamic Programming	461	18.8 Proof of NP-Completeness	527
16.4 String Edit Distance Using Dynamic Programming	465	18.9 Example Problems for Proving NP-Completeness	528
16.5 Naïve String-Matching Algorithm	468	18.9.1 SAT is NP-complete	528
16.6 Pattern Matching Using Finite Automata	469	18.9.2 Problem 3-CNF-SAT is NP-complete	529
16.7 Rabin–Karp Algorithm	471	18.9.3 Clique Decision Problem is NP-complete	530
16.7.1 Stage 1	471	18.9.4 Sum of Subsets (from 3-CNF-SAT)	531
16.7.2 Stage 2	472		
16.8 Knuth–Morris–Pratt Algorithm	474	19 Randomized Algorithms	535
16.8.1 Stage 1	475	19.1 Introduction to Randomized Algorithms	535
16.8.2 Stage 2	476	19.2 Generation of Random Numbers	537
16.9 Boyer–Moore String Matching Algorithm	478	19.3 Hiring Problem	539
16.9.1 Bad-character Shift Rule	478	19.3.1 Probabilistic Analysis of Deterministic Hiring Algorithm	539
16.9.2 Good-suffix Shift Rule	478	19.4 Primality Testing Algorithm	542
16.10 Boyar-Moore- Harspool Algorithm	480	19.5 Comparing Two Strings using Randomization Algorithm	543
16.10.1 Stage 1	480	19.6 Randomized Quicksort	545
16.10.2 Stage 2	482		
17 Iterative Improvement and Linear Programming	485	20 Approximation Algorithms	549
17.1 Introduction to Iterative Improvement	485	20.1 Introduction to Approximation Algorithm	549
17.2 Linear Programming	485	20.2 Goodness Factor	550
17.2.1 Advantages and Limitations of Linear Programming	486	20.3 Design approaches for Approximation Algorithms	551
17.3 Formulation of Lpps	486	20.4 Heuristic Approaches for Travelling Salesperson Problem	552
17.4 Graphical Method for Solving LPP	489	20.4.1 Nearest Neighbor	552
17.5 Simplex Method	493	20.4.2 Multi-Fragment Heuristic Method	554
17.6 Minimization Problems	498	20.4.3 Twice-the-path Heuristic	555
17.7 Duality	501	20.4.4 Christofides Algorithm	556
17.8 Max-Flow Problem	503	20.5 Greedy Approximation Algorithms	558
17.8.1 Ford–Fulkerson Algorithm	504	20.5.1 0/1 Knapsack Problem	558
17.8.2 Max-flow and Min-cut	506	20.5.2 Continuous Knapsack Problem	559
17.9 Bipartite Matching Problem	507	20.5.3 An approximation scheme for 0/1 Knapsack problem	559
17.9.1 Bipartite Graph	507	20.5.4 Vertex Cover Problem	559
17.10 Stable Marriage Problem	510	20.5.5 Set Cover Problem	561
		20.6 Designing Approximation Algorithms Using Dynamic Programming	563
18 Basics of Computational Complexity	516	20.6.1 Knapsack Problem	563
18.1 Introduction to Computational Complexity	516	20.6.2 Subset Sum Problem	564
18.2 Upper and Lower Bound Theory	517		
18.2.1 Methods of Finding Lower Bounds	518		
18.3 Decision Problems	519		
18.4 Turing Machines	520		
18.4.1 Languages and Turing Machine	521		

21 Parallel Algorithms	570	21.5 Simple Parallel Algorithms	578
21.1 Introduction to Parallel Processing	570	21.5.1 Prefix Computation	578
21.2 Classification of Parallel Systems	570	21.5.2 List Ranking	580
21.2.1 Flynn Classification	571	21.5.3 Euler Tour	581
21.2.2 Address-space-based (or Memory Mechanism-based) Classification	572	21.6 Parallel Searching and Parallel Sorting	582
21.2.3 Classification Based on Interconnection Networks	573	21.6.1 Parallel Searching	582
21.3 Introduction to PRAM Model	574	21.6.2 Odd-Even Swap Sort	583
21.4 Parallel Algorithm Specifications and Analysis	575	21.7 Additional Parallel Algorithms	584
21.4.1 Parallel Algorithm Analysis	577	21.7.1 Parallel Matrix Multiplication	584
		21.7.2 Parallel Graph Algorithms	587
<i>Appendix A—Mathematical Basics</i>	591		
<i>Appendix B—Proof Techniques</i>	603		
<i>Appendix C—Python and Anaconda</i>	612		
<i>Appendix D—Python Packages</i>	622		
<i>Appendix E—Laboratory Manual</i>	637		
<i>Bibliography</i>	675		
<i>Index</i>	677
